WSI's new advances in specializing in Large Diameter Seals

WSI has capability to manufacture rotary shaft seal, V-seal, rings, and other rubber molded parts up to 2,300 mm in O.D.

As a leading manufacturer of sealing products in Taiwan, WSI keeps improving efficiency and expanding capability to satisfy or even exceed requirements in different applications from customers.

WSI Large Diameter Seals include rotary shaft seal, V-seal, ring, and other rubber sealing products. Different elastomer compounds with special characteristics are available to meet or exceed requirements in different applications. For more details about WSI Large Diameter Seals, please contact us.

WSI has a strong and dedicated R&D team and offers technical consultation and support for mutual connection. Our extensive experience combined with the use of sophisticated technologies which enable us to accurately predict final product capabilities and performance.

WSI Large Diameter Seals can operate in a wide range of speed, temperature and conditions to meet different requirements. They are produced in a variety of design and materials to cater for different industrial applications such as wind turbines, heavy-dust presses, construction machinery, mining rigs, ship hydraulics, oil and water hydraulic presses, forging equipments, automotive stamping presses and so on.
